

Abundance of Life

FAQs

Q: Why are my hives not consuming the product at the rate expected?

A: We suggest using a 3-to-1 ratio of the product and your sugar-water mix as suggested on the label. However, some beekeepers have found that the final mix is not sweet enough to attract their bees. We have found that depending on the type of sugar you use in your sugar-water mix, the ratio may need to be evened out. Try a 2-to-1 Abundance of Life/sugar-water mix instead to increase the sugars needed to attract your bees.

Q: How would you suggest storing the product?

A: We suggest storing Abundance of Life in a cool, dark place. Storing the product in direct sunlight may accelerate decomposition. We also suggest using plastic tanks for storage.

Q: What is the shelf life of the product?

A: Unless you are purchasing the product in bulk, the expiration date should be on the label, which should indicate a shelf life of 6 months. When purchasing the mix in bulk, the shelf life is about 3 months, depending on how you store the product. We suggest storing the product in a cool, dark place away from direct sunlight. We also suggest using plastic tanks, rather than metal or wood tanks for storage.

Q: Does this product cure disease?

A: This product is not a medicated feed. However, the product provides nutrition needed to help increase the resilience to disease and the overall health of your bees. When using Abundance of Life, beekeepers generally observe a healthier immune response to hive infections. In our opinion, more than any other common factor, the health of your bees will determine reproduction and immunity.
